Kitsune

Personal brand mark - design reference

Creator: Samuel Sulo · Copyright: © 2026 Samuel Sulo · Asset: Personal Logo

OVERVIEW

What this mark is

Kitsune is an original low-poly fox mark used as a personal signature across the sites, applications and printed material developed by Samuel Sulo. It appears in the portfolio navigation bar and footer, and as a "built by" / "developed by" mark in client projects, wherever the identity of the author of the work needs a quiet, purely decorative signature (no link, no interaction).

It is implemented as a self-contained Vue component (see component/Kitsune.vue in this documentation folder) whose markup and geometry never change between projects: only its color props do. This lets the same mark adapt to a different site's theme (light, dark, or a custom palette) while remaining, by design, the same graphic sign. The rest of this document treats the geometry as the fixed design and each coloring as a variant of it, never as a different logo.

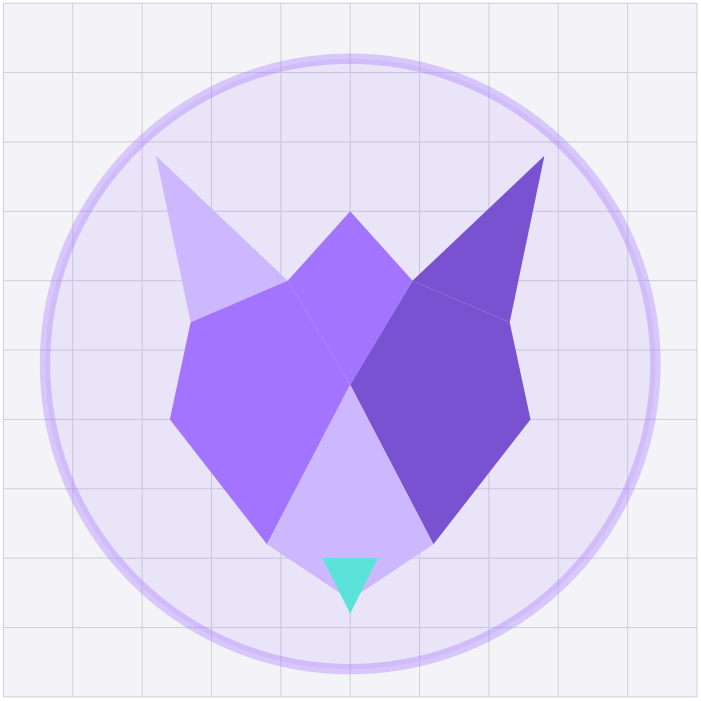
WHERE IT IS USED

- Samuel Sulo's own portfolio (samuelsulo.it): navigation bar brand mark and footer signature.
- Client websites and applications, retinted to the client's own palette, as an unobtrusive "built by" mark.
- Printed material (e.g. the business card, see docs/business-card), promoted to a front badge.

STRUCTURE

Geometry and proportions

The mark is drawn on a square 100 x 100 SVG viewBox, so it is always used at a 1:1 aspect ratio and scales losslessly to any size. Seven flat-shaded polygons (facets) build a low-poly fox head; an optional circular badge (center 50,52; radius 44) frames it. Facet fills are grouped into four color roles, listed below by the same names used in the component's props.



viewBox: 0 0 100 100 - 10-unit grid

Canvas
100 × 100 units, square (1:1)

Badge
circle, center (50, 52), radius 44

Badge stroke
1.5 units wide

Ears
2 facets: colorLight (left), colorDark (right)

Forehead
1 facet: colorMid

Cheeks
2 facets: colorMid (left), colorDark (right)

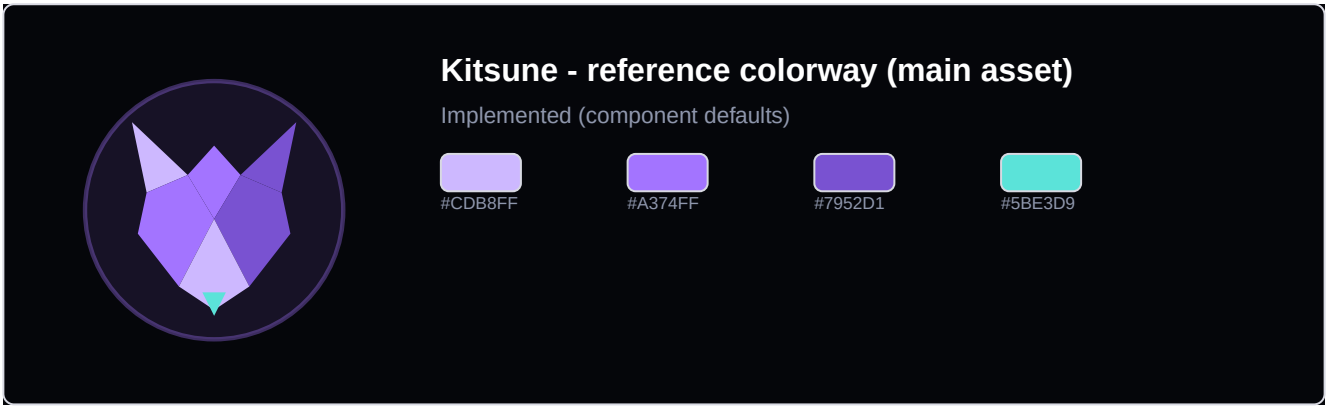
Muzzle
1 facet: colorLight, laid over the cheeks

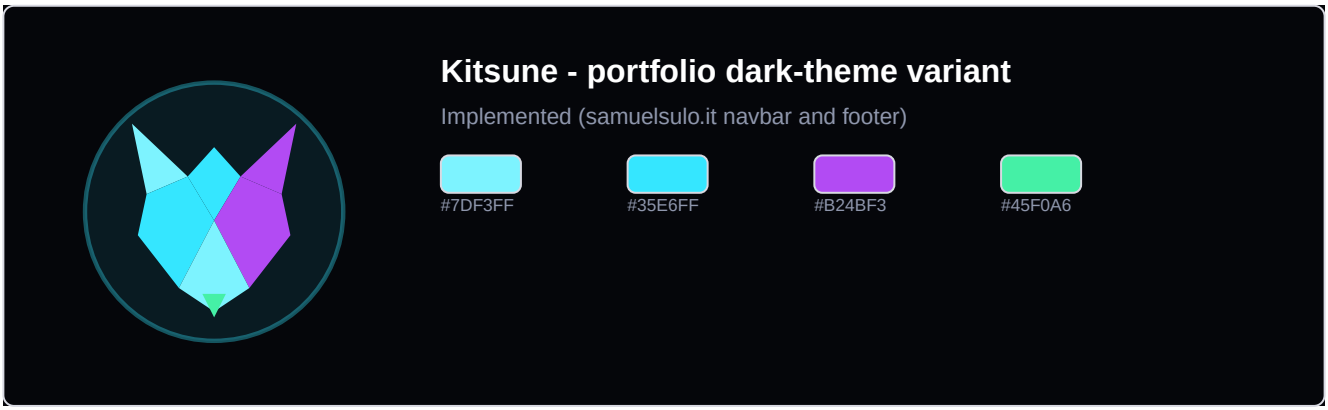
Nose
1 small facet: colorAccent

COLOR

Color roles and colorways

The mark uses four color roles (colorLight, colorMid, colorDark, colorAccent) plus a badge fill/border pair. A colorway is one concrete assignment of colors to those roles. Changing colorway never changes the geometry above: it is the same sign, differently colored. Two colorways below are implemented and verified against the current code; a third is a proposed adaptation, clearly marked as such.





COLOR

Light background, structural and dynamic variants

No project currently displays Kitsune on a light background; the variant below is a proposed adaptation, provided as a starting point should one be needed, and is explicitly not a verified, shipped colorway.

Kitsune - proposed light-background adaptation

Proposed, not implemented in shipped code

#7C3AED	#5B21B6	#3B0764	#0D9488

The badge backdrop is optional: setting badgeFill="none" renders the mark alone, useful where a surrounding UI element (button, avatar frame) already provides its own backdrop.

GUIDELINES

Usage rules

- **Keep the aspect ratio**
  Always scale the 100 × 100 viewBox uniformly. Never stretch it non-uniformly.

- **Do not distort the geometry**
  The facets, their points and the badge radius are fixed. Do not add, remove or reshape them.

- **Recolor through the documented roles only**
  Retint via colorLight / colorMid / colorDark / colorAccent (and badgeFill / badgeBorder), matching one of the colorways in this document or a new one recorded the same way. Do not recolor individual facets ad hoc.

- **Pick the variant that fits the background**
  Use a dark-background colorway (reference or portfolio) on dark surfaces, the light-background variant on light surfaces, or the currentColor variant when the mark should simply inherit the surrounding text color.

- **Minimum size**
  Below roughly 20px the facets and the nose accent lose legibility; prefer the mark-only variant (no badge) at very small sizes.

- **Clear space**
  Leave at least the badge’s own margin (the gap between the fox’s facets and the badge ring) clear of surrounding text or UI chrome.

- **It is a signature, not a button**
  No link, no interactive affordance beyond the resting/hover opacity change already built into the component.
